 **ikizler**  
"worth the light"

***Ece Yalım - Oğuz Yalım***

---

*"...as a design team, we are after pointing out real matters, seeking out real needs and adding value to people's lives with the products we design answering those needs..."*

*...we do not limit ourselves with direct users' demands only, we care a lot about the interaction an architect or an interior designer may build with our products, to unleash their creativity in constructing the space..."*

# NOON

**We are talking about the brightest moment  
of the sun. At the peak, at the highest point with  
its most luminous and effective status...**

# NOON MIDI

NOON is designed to provide a distinctive decorative appearance without compromising the quality of illumination, with respect to the existing conventional recessed lighting fixtures mounted on standard 60x60 gridded ceilings which are still widely used in office spaces.

Noon is offered in different depths and diameters so that the interior designers or architects who are indirect users can have opportunity to use them in their own unique scenarios. This will also give them the freedom to create dynamic, random layouts with multiple usages.

By means of variety of color possibilities, it comes into prominence on a conventional ceiling. Especially in multiple usages, it may create its own colorful parcel, therefore it will definitely add visual richness to ceilings that have standard gridded view. This also gives the products the potential of being a reference to specific interior layouts, emphasizing different functional areas.

## NOON MAXI

It brings decorative value to the space by means of its circular forms opposing the straight angles of the 60x60 ceiling grid and its sculptural forms hanging down. The standard body and neck carry lighting discs in different sizes that can be combined.

# NOON MINI

Circles in different sizes make the choice of desired illumination possible and provide the visualization of hierarchy between different locations with different tasks.

While mini version is capable of effective illumination for information desks, waiting halls and corridors, midi and maxi sizes are proper for large areas such as open offices, cafeterias.
